Companion data file to the PDAB Data Analysis Report: Impact of State Prescription Drug Affordability Boards on Access to Medications for Potentially Disabling Conditions — July 2024.

Executive Summary

This dataset catalogs every prescription medication identified as eligible for, or selected by, the Prescription Drug Affordability Boards (PDABs) of Colorado, Maryland, Oregon, and Washington as of July 2024. Each entry records the state, the drug, its primary therapeutic condition, and a classification of how likely the underlying condition is to be considered a disability under the Americans with Disabilities Act (ADA).

The compiled list contains 578 records across the four states. In each jurisdiction, the majority of drugs under review treat conditions that are Highly Likely or Likely to be classified as disabilities under the ADA — raising potential disparate-impact concerns about how PDABs select medications for cost-containment action.

State-level summary

State	Total drugs on list	Highly Likely disabling	Likely disabling	Total potentially disabling	%
Colorado	343	306	28	334	97.4%
Maryland	8	3	5	8	100.0%
Oregon	39	24	15	39	100.0%
Washington	188	94	68	162	86.2%

About the classifications

Highly Likely indicates the drug's primary condition is widely recognized as a disability under the ADA (e.g., HIV, cancer, autoimmune disease, severe genetic disorders). Likely indicates a condition that may rise to ADA-protected status depending on individual severity and functional limitation. Unlikely indicates the condition typically does not meet the ADA's definition of disability.

Notes: Counts in the State-level summary reflect either the board's full Possible Review pool (Colorado, Oregon, Washington) or the smaller list ultimately Selected for Review (Maryland). Where a state has both, the larger eligible pool is shown here; per-state pages and the full data appendix list the records exactly as the boards published them.
